	Regulator	DO NOT USE		
	SCBA Bottle/Frame	DO NOT USE		

Steramine 1-G Tablets: 150 tablets per bottle

- This product will be used by the Disinfecting Task Force to **sanitize** the dishes, utensils, and food contact areas like dining tables, ice machines, and countertops.
- Mix 1 tablet per gallon of water (in sink) to sanitize all dishes, utensils, glassware, tea containers, coffee pots, and ice machine scoops with a **contact time of 1 minute**.
- Fill the HFD kitchen sink half full of water (usually 4-5 gallons) and add 5 tablets.
- Smaller sized sinks will need less tablets.
- Dip a bowl of fresh mixed solution out of the sink and use a clean rag. Start wiping all tabletops, refrigerators handle, lid of ice machine (Front & Back), coffee tables, etc. Allow to dry.
- Place all dishes, etc. in solution for 1 minute and allow to air dry on rack before use.
- Prepare a fresh solution daily as it will lose its effectiveness over time.
- **Do not get any Steramine on any firefighting gear** as this is not approved for application by manufacture.
